

Dear Sir/Madam,

I am Mert HELVACI. I graduated from Bilkent University Mechanical Engineering Department in June, 2016 with a CGPA of 3.09. After 4 years of experience as a mechanical engineer, I have changed my career route to become a web developer and I have developed a passion for it during my studies. Following a long period of hard-working and high motivation to improve myself, I finally started to work in this field in July, 2020. Since that time, working in different companies with unique company values and motivations has been a huge leap for my career in terms of both technical and non-technical aspects.

With 6 years of professional experience, frontend development with React is at the core of my expertise. I have strong knowledge and hands-on ability in React with TypeScript, and I am highly proficient in Next.js with the App Router architecture, which has become the recommended approach for modern React applications. On the global state management side, I work confidently with Redux Toolkit (RTK) and Redux Toolkit Query (RTK Query) for implementing API slices and managing application state. I am also well-versed in writing semantic markup and delivering accessible, inclusive web experiences for users with disabilities. While I do not list it as a primary focus, I am also comfortable with developing fully responsive websites using both traditional and modern CSS features.

Beyond my frontend expertise, I am actively expanding my skill set into DevOps technologies, driven by a genuine interest in understanding the full software delivery lifecycle. I have a solid working knowledge of Docker and have recently completed my studies in Kubernetes, earning the Certified Kubernetes Application Developer (CKAD) certificate from KodeKloud in April 2026. I believe that a frontend developer who understands containerisation and orchestration can contribute more meaningfully to cross-functional teams and modern CI/CD pipelines.

Putting my technical part aside, I am well used to and have the discipline for working in a team and I have worked among a fair number of different teams so far. I am always aware of my responsibilities to myself and my teammates. Moreover, I have very good communication skills and I am highly self-motivated and fast-learner.

Considering my technical skills, ambition for learning and following new technologies and eagerness to work hard, I believe that I can successfully fulfill the requirements of the position given in your job description quite well. I would be very happy to discuss the position and my experience further. Thank you for your valuable time.

Best Regards,

Mert HELVACI
